EXAMINER'S ACTION

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-4 and 15-20 are, drawn to a semiconductor device, classified in Class 257, subclass 52.

II. Claims 5-14, drawn to process for making semiconductor devices, classified in Class 437, subclass 40.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). In the instant case unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by processes materially different than those/that of the group II invention, for example, the semiconductor material can be directly deposited on a surface, thus a melting step is unnecessary; or crystallizing the noncrystal semiconductor by furnace annealing instead of using laser beam.

Because these inventions are distinct for the reasons given above and as shown by the above different classifications, the fields of search are not co-extensive and separate examination
